GUILLERMINA FERNANDEZ

PYTHON DEVELOPER

ABOUT ME

I'm a **fast learner**, **self-trained**, **independent** developer with a pasion for **problem-solving** and making processes more **efficient**.
I'm adaptable to new tasks and obligations and always eager to learn and grow.
My main goal is to become a skilled developer. I enjoy working with new technologies and tools, and I'm always looking for ways to improve my skills.
I love coding and I'am passionate about being able to improve work efficiency by developing new solutions that automate tasks and reduce errors. Every project must be approached with suitable technology, so learning new skills is a must.

STUDIES & OTHER INFORMATION

Programming Courses

Codecademy - 2020/2022

• Python 3 • HTML & CSS • Django • SQL • JavaScript

Bachelor's degree in Marketing

UCEL - 2006/2012

First Certificate in English (Advance)

ESOL 1 Grade B2 - 2006

Other Working Experience

Faroship SRL - Shipping Agency - 2011/Present

Billing and invoicing of vessels, processing documentation, payrolls, payments, collections, preparation of VAT purchases and sales forms.

PROJECTS

I have been working with Python and Django, implementing databases with MySQL and SQL, and streamlining various processes with JavaScript. I have developed an accounting software and a web application for shipping agencies' operations.
I have studied the business model and its requirements, laid out the models and relations, designed the UIs, and managed all database queries and controllers.

Shipping Agencies' Operations Web App.

Python + Django + HTML + JavaScript
Fullstack development

Web application to perform shipping agencies' tasks online increasing productivity, decreasing errors, and having access to vessels' information and operations from everywhere.
• Software architecture.
• Built CRUD operations on different models such as Vessels, Clients, Suppliers, Invoices, Payment Orders, and more.
• Developed Watchmen and Head Tally Clerk online appointments and payroll calculations and receipts with export to PDF and Excel.
• Set up users' authentications and authorizations to grand access to specific models depending on the user's role in the company.
• Configured Excel files uploading with automate processing of information to compare results in different sheets/documents.
Used technologies:
• Python and modules/libraries/packages such as datetime, json, fillpdf, fpdf, and openpyxl among others.
• Django and it's buil-in SQLite database.
• HTML, CSS, and Bootstrap for the frontend.
• JavaScript, JQuery, Ajax, JSON, momentjs.
• Regex, Selenium and BeautifulSoup.

Shipping Agencies' Accounting Sofware

Python + PyQt5 + MySQL
Fullstack development

Custom software adapted exclusively for shipping agencies to solve the issues of other accouting sofware tried before.
• Software architecture, models, and field relations.
• Developed solutions fixing concept errors and operational errors such as document export errors, date conversion errors, and currency exchange rate errors.
• Worked on correct tab indexation to improve performance.
• Considered correct accounting concepts.
• Implemented database queries and configured the needed connections.
Used technologies:
• Python and modules/libraries/packages such as datetime, fillpdf, and openpyxl among others.
• PyQt5 for the frontend.
• MySQL and MySQL Workbench for database.
• Regex
