GUILLERMINA FERNANDEZ

PYTHON DEVELOPER

ABOUT ME

DevOps Engenieer Python Developer with demostrated experience working with software development. Skilled in Python, MySQL, SQL, and Django. Looking forward to working and developing programming skills. Always trying to make working processes more efficient by learning new things and applying them to the task I'm working on. Fast learner and adaptable to new tasks and obligations.

SOFT SKILLS

- Problem-Solving
- Self-Motivation and independence
- Perseverance
- Responsability

PROGRAMMING EDUCATION

- **Learn JavaScript Course** | 2022
- **Learn SQL Course** | 2022
- **Build Python Web Apps with Django** | 2021
- **Learn HTML & CSS Course** | 2021
- **Learn Python 3 Course** | 2021

LANGUAGES & OTHER STUDIES

- Spanish | Native
- English | Advance | ESOL 1 Grade B2 | 2006
- Bachelor's degree in Marketing | 2006-2012
  Universidad del Centro Educativo Latinoamericano de Rosario

PROGRAMMING EXPERIENCE

Python + Django

Shipping Agency Operations web app.

Fullstack development of the entire project

Web application to perform shipping agencies tasks online to increase productivity, decrease errors, and have access to vessels and operations information from everywhere.

- Software architecture
- Built CRUD operations on Vessels, Clients and Suppliers.
- Developed Watchmen and Head Tally Clerk online appointments and payroll calculations.
- implemented features for sales registration.
- Set up crew members' embarkments and disembarkments (documents, and notes needed to present to different government organizations).
- Set up users' authentications and authorizations to grant access to specific models depending on the user's role in the company.
- Configured Excel files uploading with automate processing of information to compare results in different sheets.

Used technologies:

- Python and Python libraries such as datetime, fillpdf, fpdf.
- Django with it's built-in SQLite database.
- HTML, CSS, and Bootstrap for the frontend.
- Javascript, JQuery, Ajax, JSON, momentjs.
- Selenium

Python + PyQt5 + MySQL

Shipping Agency Accounting software.

Fullstack development of the entire project

Custom software adapted exclusively for shipping agencies, solving the issues of other accounting software tried by the company.

- Software architecture, models, and field relations.
- Set up CRUD operations on Clients, Suppliers, Vessels, Services, and Invoicing parameters (currencies and exchange rates, payment methods, port terminals, etc.)
- Developed solutions on CRUD operations errors, documents export errors, and currency exchange rate errors.
- Fixed issues with date conversions.
- Worked on correct tab indexation to improve performance.
- Considered correct accounting concepts.
- Other developed functionalities: Invoices and payment order registration, export of payment orders and statement accounts, generation of VAT forms, registration of vessels and related services.
- Implemented database queries and configured the needed connections.

Used technologies:

- Python and Python libraries such as datetime and openpyxl
- PyQt5 for the frontend.
- MySQL and MySQL Workbench for database.
- Regex
